

SIDDHI SINGH

Backend Developer

Node.js • Express.js • MongoDB • PostgreSQL • Redis

India | siddhi.singh561@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Early Career Backend Engineer with hands-on production-style development experience across Node.js, Express.js, MongoDB, PostgreSQL, and Redis. Built secure REST APIs, authentication systems, multi-tenant applications, and asynchronous background job processing. Completed a 6-month backend engineering internship and bring 4 years of freelance consulting experience managing client communication, requirement gathering, and end-to-end project delivery. Comfortable owning a problem from design through deployment.

TECHNICAL HIGHLIGHTS

- Built 5 production-style backend systems spanning APIs, queues, gateways, and webhooks.
- Implemented JWT and Google OAuth authentication across multiple applications.
- Designed multi-tenant architecture with role-based access control (RBAC).
- Developed asynchronous background processing using BullMQ and Redis, including retry and dead-letter queue handling.
- Built a centralized API gateway with Redis-based rate limiting and a circuit breaker pattern.
- Secured service-to-service and webhook communication with HMAC signature verification.

TECHNICAL SKILLS

Languages	JavaScript, Java, SQL
Backend	Node.js, Express.js, REST APIs, Socket.io
Databases	MongoDB, PostgreSQL, Redis
Architecture	RBAC, Multi-tenancy, API Gateway, BullMQ, Circuit Breaker
Security	JWT, OAuth 2.0, Passport.js, Helmet, bcrypt, Rate Limiting, HMAC Verification
Developer Tools	Docker, Git, GitHub, Swagger, Postman
APIs	Gemini API, Resend, ImageKit

PROFESSIONAL EXPERIENCE

Web Developer Intern | Himritva

Jan 2025 – Jul 2025

- Engineered backend modules for a production-style application using Node.js and Express.js.
- Implemented secure REST APIs and authentication workflows for core application features.
- Collaborated on Projectify's backend architecture, including multi-tenancy and access control.
- Improved codebase maintainability through modular service design and input validation.

Freelance Brand & Digital Experience Consultant | Self-employed

2021 – 2025

- Managed multiple client engagements end-to-end, from discovery through delivery.
- Gathered requirements and translated business goals into digital solutions and deliverables.
- Led stakeholder communication, timelines, and project execution across concurrent clients.
- Built strong problem-solving, planning, and client-management skills directly transferable to engineering collaboration and requirement-driven development.

BACKEND ENGINEERING PROJECTS

Projectify

[GitHub](#) | [Live Demo](#)

Multi-tenant project management platform with Kanban workflows and real-time collaboration.

Tech Stack: Node.js, Express, MongoDB, Redis, JWT, Socket.io

- Engineered a multi-tenant architecture with role-based access control (RBAC) to isolate workspaces and permissions across teams.
- Implemented JWT and Google OAuth authentication for secure, streamlined user onboarding.

- Built real-time task and workflow updates using Socket.io for live team collaboration.
- Integrated Redis to support caching and session handling behind the platform's analytics views.

API Gateway

[GitHub](#)

Centralized API gateway for authentication, traffic control, and service routing.

Tech Stack: Node.js, Express, Redis

- Designed and built a centralized gateway to handle authentication and routing across backend services.
- Implemented Redis-backed rate limiting to protect downstream services from abuse.
- Applied the circuit breaker pattern to contain failures and improve system resilience.
- Built request proxying logic to route traffic to the correct downstream service.

Email Job Queue

[GitHub](#)

Asynchronous background job processing service for reliable email delivery.

Tech Stack: Node.js, BullMQ, Redis, PostgreSQL

- Built an asynchronous job processing pipeline using BullMQ workers and Redis queues.
- Implemented retry logic and dead-letter queues to handle failed deliveries without data loss.
- Designed a PostgreSQL persistence layer to track job state and delivery history.
- Decoupled email delivery from the main application flow to improve reliability.

Webhook Delivery Service

[GitHub](#)

Webhook delivery platform for reliable event distribution to third-party integrations.

Tech Stack: Node.js, Redis, PostgreSQL

- Built a webhook delivery platform for distributing events to external integrations.
- Implemented HMAC signature verification to secure and authenticate webhook payloads.
- Designed exponential backoff retry logic to handle delivery failures gracefully.
- Built an event persistence layer in PostgreSQL to support auditability and replay.

AI Interview Prep

[GitHub](#)

AI-assisted interview preparation platform with personalized question generation.

Tech Stack: Node.js, Express, Gemini API, MongoDB

- Developed an AI-assisted platform using the Google Gemini API to generate personalized technical interview questions.
- Implemented session management and authentication to support user-specific interview tracking.
- Built backend services to manage question-generation state and track user progress over time.

EDUCATION

Degree	University	Year	CGPA
Master of Computer Applications (MCA)	SNDT Women's University	2025	8.1
Bachelor of Computer Applications (BCA)	SNDT Women's University	2022	9.1

LEADERSHIP & ACHIEVEMENTS

- Placement Head, MCA
- President, Infomaniac IT Club
- Best Final Year Project Award
- Best Designer Award
- National-Level Infographic Competition Winner
- Department Website Designer
- College Fest Lead Organizer & Anchor
